

FOR IMMEDIATE RELEASE:

Rainier Industries is pleased to announce the achievement of ISO-14001 certification, the premier certification in environmental stewardship.

In 2006, we developed Rainier's Sustainability Plan, bringing our workforce together to take positive action and make every aspect of our company greener, from how we manage our offices to the manufacturing of products and their installation. Our formal Environmental Management System was launched in 2008.

This certification is in addition to our Quality Management System – we are also ISO 9001 certified. Both ISO certifications are through TUV Rhineland, the world leader in competence testing and certification. In our daily operations, we strive to use environmentally friendly products that will protect our natural resources, to reduce our energy consumption and recycle the bulk of our waste. Rainier also encourages employees to be more environmentally sensitive at home and to do their part in reducing their carbon footprint by using alternative methods of transportation commuting to and from work.

We take pride in providing our customers with products produced with sustainable materials. We use wood harvested only from sustainable forests and treat it with non-solvent preservatives. The use of PVC based fabrics is being reduced and our printers use UV-cured water-soluble inks rather than the more common solvent-based inks. We are continually looking for innovative ways to incorporate eco-friendly materials into our products.

At Rainier, being green is not just another catch phrase. “To respect and to protect our environment” is an initiative that is part of our mission statement and put into practice every day. The team at Rainier is committed to helping protect and preserve our natural resources for generations to come.
