RAINIERTENTS

Maximizer Tent Systems

THE LATEST IN SLIDE-TOP TECHNOLOGY
PULLING YOUR TENT TOPS HAS NEVER BEEN EASIER.

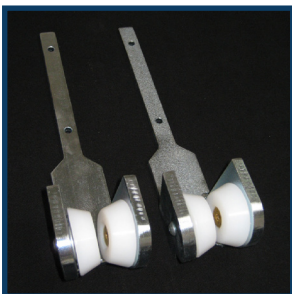

SLIDE-TOP PULLING TOOL

The new Keder Guide tool was designed to take the abuse and damage from mis-aligned and uneven pulling of slide-in tent tops, extending the life and maintaining the appearance of your tent tops. The guides attach to your tent tops with a small carabineer and are pulled through the rafter tracks ahead of the tent top.

The guides can be used in tandem with keder feeders in the Maximizer Tent System, or as a stand-alone tool with other brands of tracked tent frames.

Attaches to top with small carabineer

KEDER FEEDER

Rainier Keder Feeders makes the installation of slide-in tops faster and easier, by aligning the keder on the tent top with the tracks on the rafters. They are designed to fit into the end of the Maximizer Tent System's track rafter and can reduce damage, snags and tears due to the uneven pulling of tent tops.
